

STROMER CONCEPT ST2020

CONCEPT BIKE

Stromer has spent the last decade working on **the vision of modern, inspiring mobility** where valuable time is no longer wasted in traffic jams. Over these last 10 years Stromer has set the standards for power, range, design and connectivity in the fast Speed Pedelec class – and it's not about to let the pace drop now. The ST2020 Concept Bike was presented at Eurobike on September 5, 2019.

Belt drive rather than chain drive

With the ST2020 concept, Stromer is now going down a new road: For the first time in the company's 10-year history, it is installing a belt drive. The advantages are its low maintenance effort and long life, and that it is almost silent in operation however hard the rider hits the pedals. The 5-gear shift system from Sturmey Archer delivering a transmission ratio bandwidth of 243 %, and the powerful 618 Wh battery with a range of 25 – 75 miles (up to 112 miles with the optional upgrade) make the ST2020 the ideal replacement for the car.

Full connectivity is achieved thanks to OMNI C. The app allows riding statistics to be retrieved and motor settings adjusted to suit the rider. The ST2020 also has seamless locking and unlocking, while the battery can be removed keylessly using the integrated touchscreen. Stromer's unmistakable trademark, the Daylight integrated into the head tube, ensures visibility even on bright days. The reliable drive power enables the ST2020 to accelerate effortlessly to 28 mph, maximizing the fun of the ride. The seat position can be customized for perfect riding comfort, while a suspension fork is available as an option.

The market launch is scheduled for late fall 2020.
